PROFESSIONAL SUMMARY

Full Stack Java Engineer with **4 years** of experience (Oct 2022 – Present) owning end-to-end architecture, backend, and frontend development for enterprise SaaS platforms, ERP systems, and LIMS. Core stack: **Java 8/17, Spring Boot, React.js, MySQL, Redis, AWS**. Proven track record of independently delivering scalable, production-grade systems while directing junior developers and collaborating directly with clients.

TECHNICAL SKILLS

- **Languages:** Java (8/17), SQL (Structured Query Language), JavaScript
- **Backend Frameworks:** Spring Boot, Spring Security, Hibernate, Spring Cloud, RESTful Microservices
- **Databases & Caching:** MySQL, Microsoft SQL Server, Redis, Distributed Caching (Caffeine, Ehcache)
- **Cloud & DevOps:** Amazon Web Services (AWS EC2, S3), Nginx, IBM Cloud, Git, Maven
- **Frontend Development:** React.js, Flutter, UI Components
- **Testing & Tools:** JUnit, JMeter, Postman, API Testing
- **Core Concepts:** Multi-Tenant SaaS Architecture, System Design, Database Optimization, Workflow Automation, Agile Methodology

PROFESSIONAL EXPERIENCE

Senior Java Software Engineer

Cognivox Solutions, Hyderabad

Sep 2025 – Present

- Sole full-stack owner of **EmtransQ**, a multi-tenant SaaS platform (Java, Spring Boot, React.js, MySQL) – covering tenant isolation, subscriptions, and payment integration.
- Directed 3–4 junior developers on module-level implementation and QA, while personally owning system design, integration decisions, and release sign-off.
- Accelerated feature delivery across multiple concurrent enterprise products while maintaining full ownership of architecture, implementation, debugging, and production releases.
- Built and independently maintain **Savvy Nutri**, a pharmaceutical LIMS covering procurement, production, quality assurance, inventory, and finance workflows.
- Own **V-Square ERP** end-to-end, including configurable approval workflows, employee operations, settlement processing, and role-based access control.
- Delivered a continuous pipeline of additional modules and internal tools – including agricultural traceability, UID/label printing systems, and retailer engagement platforms – across multiple concurrent product lines.
- Manage AWS EC2 deployments, production releases, and server configuration for all owned platforms.

Assistant System Engineer (Java Developer)

Empover i-Tech Pvt Ltd, Hyderabad

Apr 2023 – Sep 2025

- Personally developed and maintained Spring Boot REST APIs for a platform serving over 200,000 users; optimized query patterns and endpoint logic to cut average API response time by roughly 25%.
- Built reusable React.js components adopted across the product's core screens, supporting a platform with over one million monthly visits.
- Introduced Redis caching and reworked SQL indexing on high-traffic endpoints, cutting database load and latency by roughly 30% on the modules I owned.
- Implemented secure REST integrations with payment gateways and third-party services, handling upwards of 50,000 transactions monthly with zero reported integration failures.
- Delivered additional agri-focused tools – Vyapar Mitra (retailer engagement), MCRC (farm operations), and UID/label printing systems.

Java Developer Intern

Empover i-Tech Pvt Ltd, Hyderabad

Oct 2022 – Mar 2023

- Implemented distributed caching using Redis, Caffeine and Ehcache, improving application performance by 35%.
- Optimized SQL queries and developed backend APIs supporting over 10,000 daily transactions.
- Developed React.js UI enhancements improving user experience and reducing page abandonment by 15%.

KEY PROJECTS

- **EmtransQ (Multi-Tenant SaaS Platform):** Sole architect and developer of a subscription-based SaaS platform with multi-tenant data isolation, UID-based tracking workflows, and integrated payment gateway. Designed the tenant isolation strategy and subscription billing logic independently.
- **Savvy Nutri (Pharma LIMS Platform):** Independently built a pharmaceutical manufacturing and quality-audit platform covering procurement, production, inventory, and finance modules, with end-to-end traceability from raw material to dispatch.
- **V-Square ERP:** Owned design and development of a configurable approval-workflow engine supporting employee operations, settlements, and role-based access control across multiple departments.
- **Shiva Shakti Traceability Platform:** Built a farm-to-farmer traceability system with UID generation and distributor/retailer tracking, including a loyalty and rewards program with point-based redemption and vendor-side redemption integrations.

EDUCATION

B.Tech in Computer Science Engineering

2019 – 2022

Vaagdevi Engineering College

Diploma in Engineering

2016 – 2019

Government Polytechnic College
